Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

ADIPFDD@bipc.com

Office Action Summary

Application No.

10/585,354

Applicant(s)

PIKKALA ET AL.

Examiner

Marina Fishman

Art Unit

2832

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 January 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
- Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

General status

1. This is a Final Action on the Merits for RCE. Claims 1 - 9 are pending in the case and are being examined.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 9, lines 11-14, it is not clear what is meant by "the gas flow channel comprising a hole provided in a portion of the first connector located inside the frame and adapted to conduct an electric current". Since it will inappropriate to say that the hole conducts the current, the recitation should be revised to -- the gas flow channel comprising a hole provided in a portion of the first connector located inside the frame and the first conductor is adapted to conduct an electric current."

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morel et al. [US 5,357,066] in view of Leone et al. [US 5,448,033].

Regarding Claims 1 and 9, Morel et al. disclose a switching device configured to open and close a current circuit, the switching device comprising:

- a switching device comprising a frame [8];
- a first connector [7a]
- a second connector [7b];
- the first connector and the second connector extending from inside the frame to outside the frame, the portion of the first connector remaining inside the frame is configured to conduct an electric current in a closed state of the switching device;
- means [3] for connecting the first and the second connector electrically to one another; and one or more gas flow openings [not numbered] provided in the frame and arranged for a gas flow produced by a switching event.

Regarding Claim 1, Morel et al. disclose all the claimed elements except for a portion of the first connector remaining inside the frame comprise a hole. Leone et al. discloses a first connector [40] remaining inside the frame comprises a hole [44, 64; Figures 2, 6]. It would have been obvious to one of ordinary skill in the art at the time the invention is made to provide a hole in the first connector of Morel et al., as suggested by Leone et al., in order to split the current [Leon et

Art Unit: 2832

al., column 4, lines 32 - 34]. It is noted that, though the holes in the connector of Leon et al. are not intended for allowing the gas flow, they are capable of allowing the gas flow.

6. Claims 1 - 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lemmer et al. [US 4,401,863] in view of Leone et al. [US 5,448,033].

Regarding Claims 1 and 9, Lemmer et al. discloses a switching device configured to open and close a current circuit, the switching device comprising:

- a switching device comprising a frame [1, 2]
- a first connector [3];
- a second connector [4], the first connector and the second connector extending from inside the frame to outside the frame, the portion of the first connector remaining inside the frame is configured to conduct load current in a conducting state of the switching device;
- means [7, 18] for connecting the first and the second connector electrically to one another.

Lemmer et al. disclose arc quenching plates [21], and gap between the means for connecting [7, 18] and the plates [Figure 6] on either side of means for connecting the contacts, which would form openings for the gases. Lemmer et al. disclose all the claimed elements except for the first connector comprise a hole. Leone et al. discloses a first connector [40] remaining inside the frame comprises a hole [44, 64; Figures 2, 6]. It would have been obvious to one of ordinary skill in the art at the time the invention is made to provide a hole in the first connector

Art Unit: 2832

of Lemmer et al., as suggested by Leone et al., in order to split the current [Leon et al., column 4, lines 32 - 34]. It is noted that, though the holes in the connector of Leon et al. are not intended for allowing the gas flow, they are capable of allowing the gas flow.

Regarding Claim 2, the frame includes an upper part and a lower part, the lower part being arranged to reside in the vicinity of frame structures of a mounting space, such as a switchgear cubicle, and that wherein each of said gas flow openings provided in the frame resides farther from the lower part of the switching device than the first connector and the second connector. Regarding Claims 3 and 6, Lemmer et al. disclose the first connector and the second connector are identical with one another. Regarding Claims 4, 5, 7 and 8, Lemmer et al. disclose the claimed invention except for specific dimensions of the gas flow openings. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide proper size of gas opening in a proper orientation, since it has been held that change in size or shape, only requires routine skill in the art. [In Re Rose 220 F2d 1048, 189 USPQ 143 (CCPA 1976) and In Re Dailey 357 F2d 669, 149 USPQ 47 (CCPA 1966). The motivation for providing the gas opening is to properly exhaust the gases away from the contacts.

Response to Arguments

7. Applicant's arguments filed 1/5/2009 have been fully considered but they are not persuasive.

8. The Applicant has argued, that Morel does not include any gas flow openings provided in the frame and arranged for a gas flow produced by the switching event. Also, Lemmer does not include any discussion of gas flow produced by switching event.

Although the references do not disclose gas flow, however the opening of the contacts create hot gases which creates a turbulent gas flow inside the switchgear, and by nature, the gas will flow in every possible direction of least resistance. The hole in the first connector would be an area, where gas flow would encounter less resistance and hence, by operation of natural principle, the gas will flow through the hole in the first conductor.

Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
